

KubixSquare Internship Front-End Team 4

Final REPORT

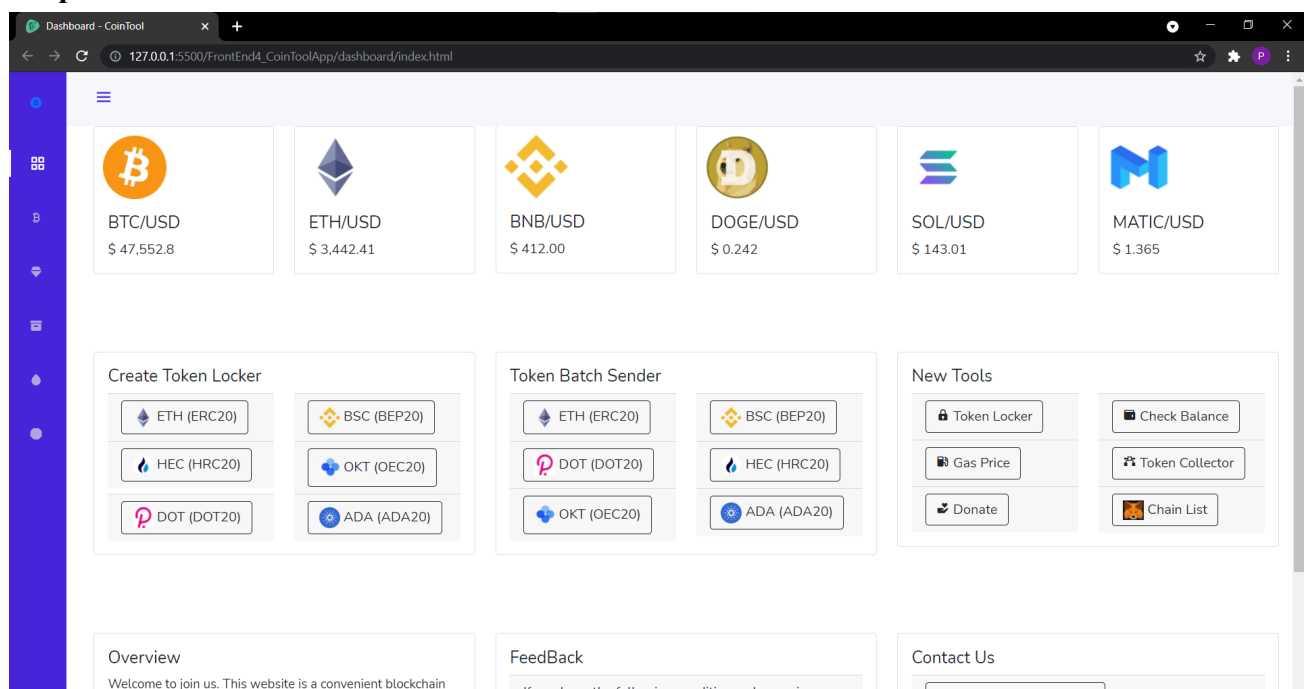

Problem Statement:

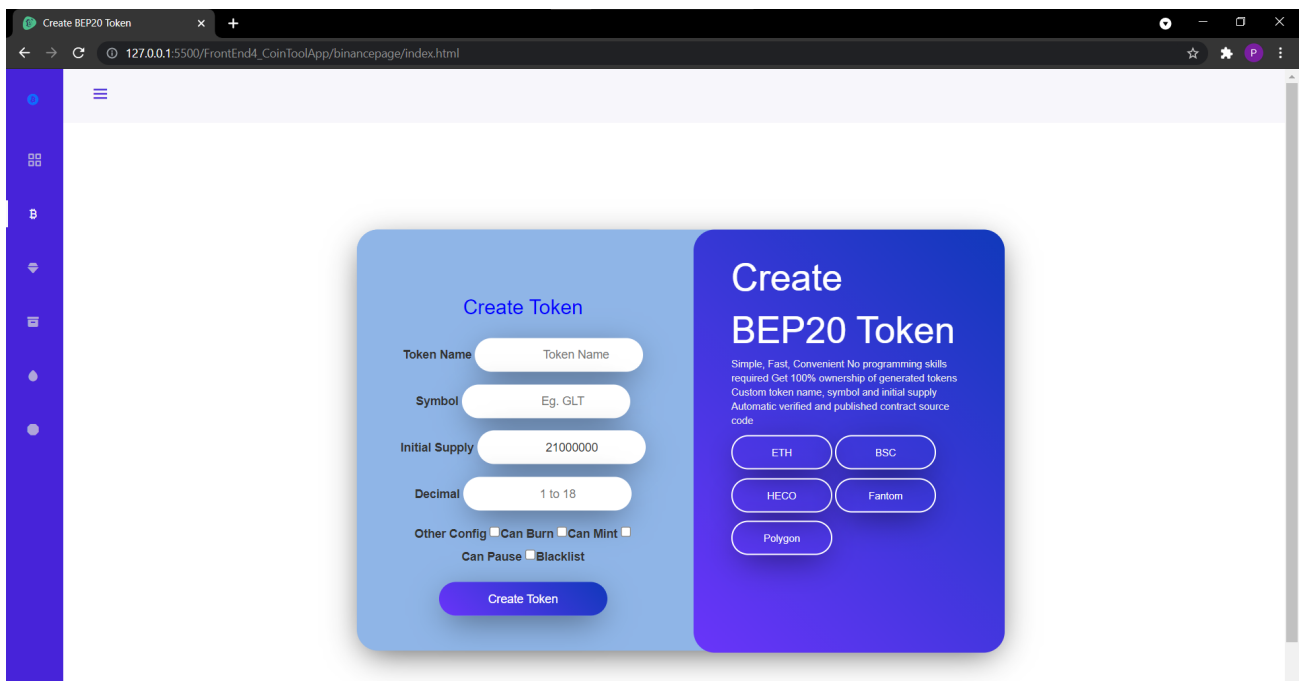

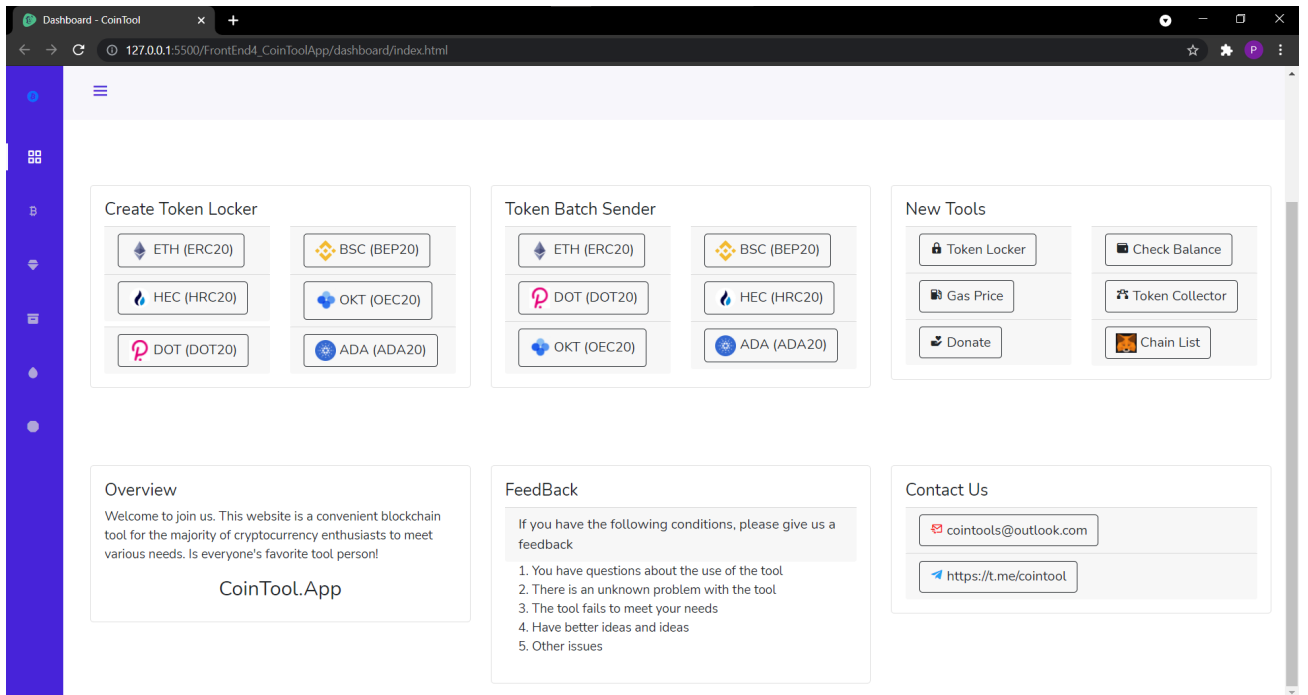

Clone Of Cointool.app website. CoinTool is an easy-to-use Dapp for bulk sending ERC20 tokens to multiple addresses with a single transaction. All functionalities should be covered along with unique design.

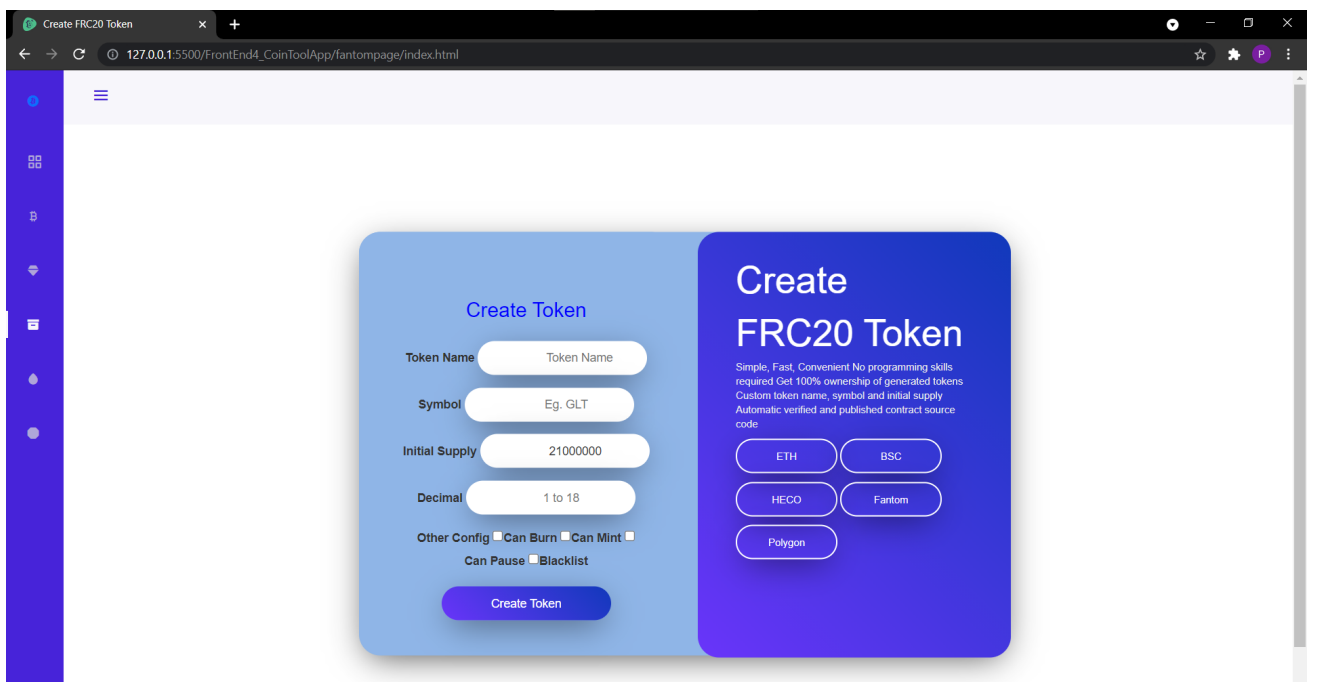

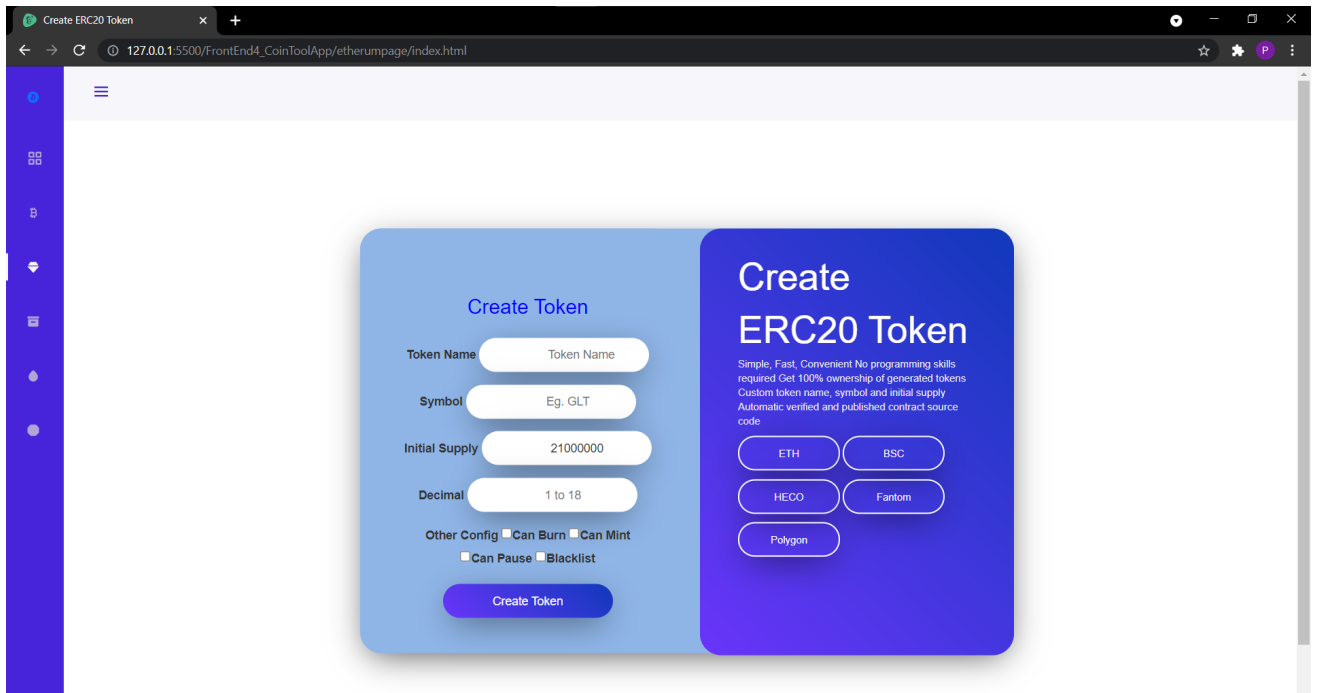

Team Members:

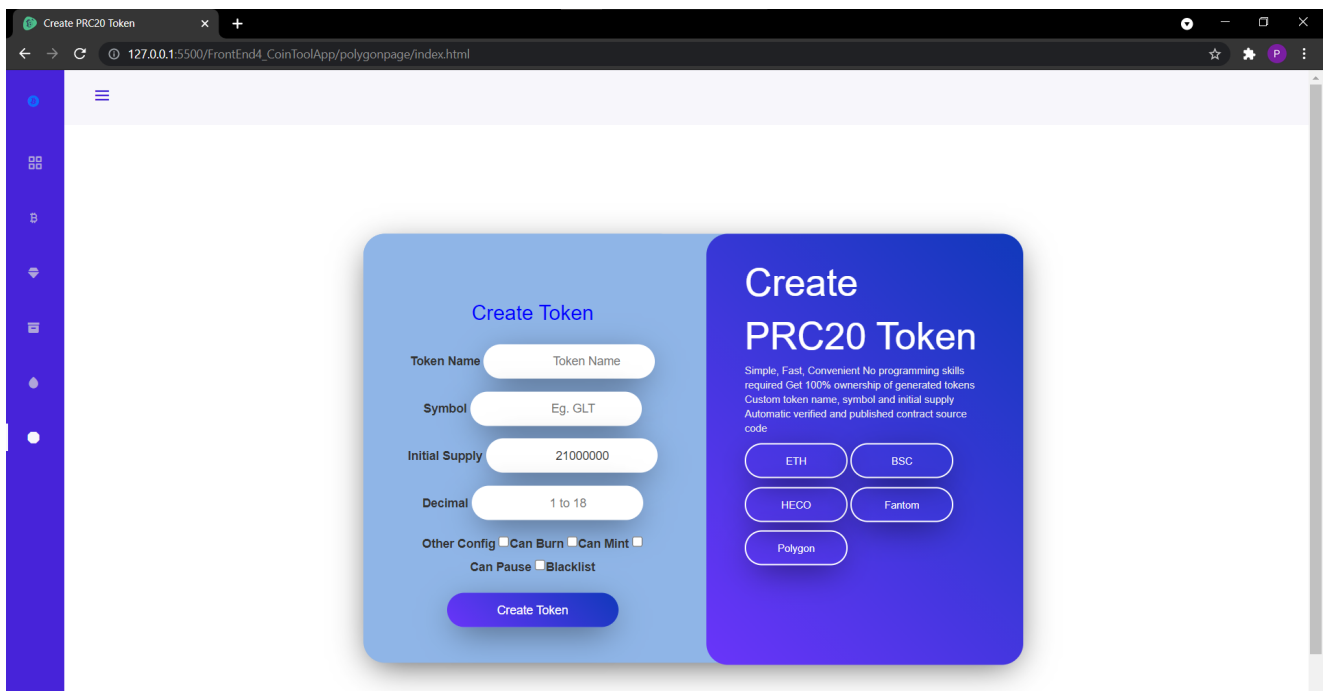

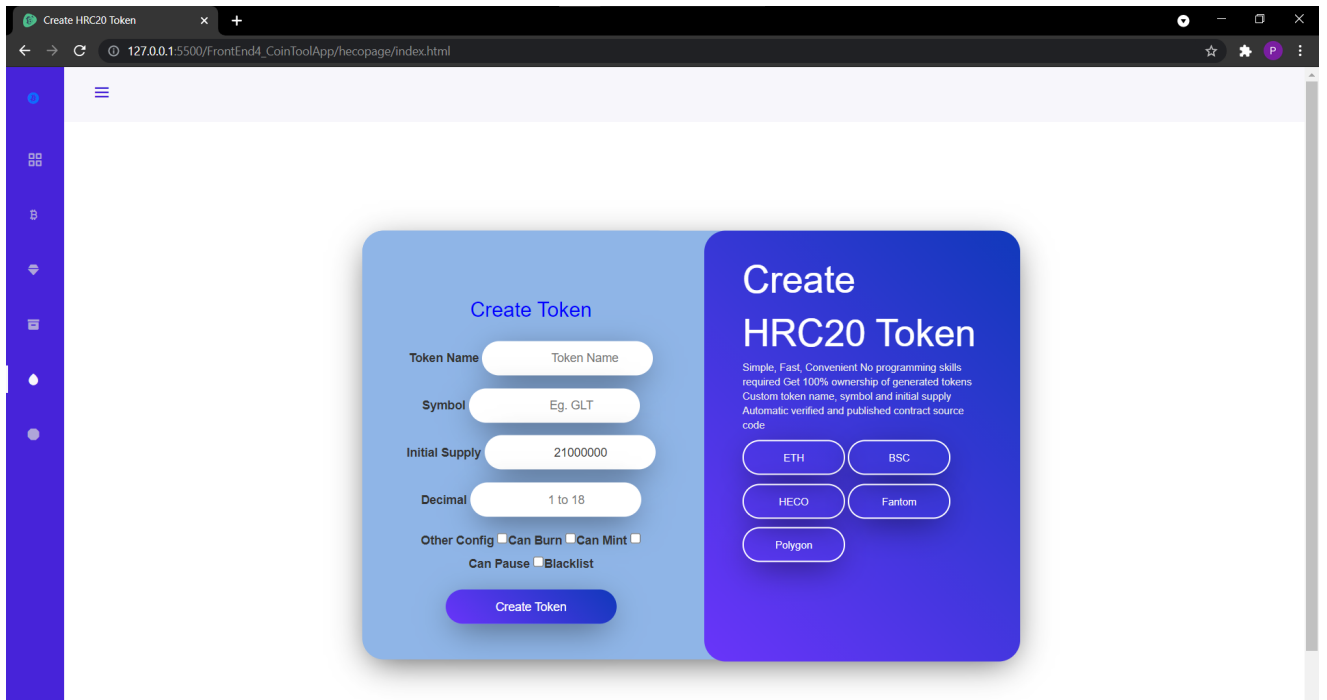

- Parth Dali
- Mahek Desai
- Selina Ger
- Dion Chettiar

Output:

Timeline:

Week 1: Introduction and Little Research on the topic.

Week 2: Research on the topic and revision of the technologies.

Week 3: Decide Template and Proposed model for the project.

Week 4: Distribute work and start working on the assigned pages.

Week 5: Check progress and make changes as per member suggestions.

Week 6: Make changes and debug bugs that came across.

Week 7: Complete all the remaining pages and link them together.

Week 8: Last minute corrections and final touch up or fixing any issues.
